Bionic Golf Glove Aqua for Men

Item number	BIO Aqua Men
Brand	Bionic
Manufacturer part no.	BIO Aqua Men
Category	Gloves

Better Grip in wet conditions

Description

Get a Better Grip in Wet Weather

UNIQUE FEATURES

Suede microfiber material that becomes tackier when wet to reduce club slippage. Unique suede microfiber material is more durable than a traditional leather glove.

Bionic Gloves

Bionic Gloves are truly unique in that they are the only gloves on the market which have been designed by a leading orthopaedic hand surgeon. The man behind the technology is called Dr Jim Kleiner and he knows that your hand isn't flat; in fact it is made up of several natural ï¾·gpeaks and valleysï¾·h and with the insertion of pads (technically called Anatomical Relief Pads, see below) on to the inside of the glove, they help to smooth these out and reduce the chance getting calluses or blisters. The pads also help to optimise grip pressure and means that you donï¾·ft have to grip the golf club as firmly as what you do with a ï¾·gnormalï¾·h glove. This is particularly advantageous for people who suffer from any kind of hand condition, such as arthritis. (Video at the end of the text!)

The technology behind the glove is as follows:

Anatomical Relief Pads

The hand has natural peaks and valleys determined by the bones in your hand. The high points of the bone can rub against the club and can cause calluses, blisters and hand fatigue. The pads smooth out these peaks and valleys and help to improve grip pressure, reduce hand fatigue and reduces the chances of getting calluses or blisters.

Pre-Rotated Finger Design

Your fingers are pre-rotated which means your forefinger and small finger rotate inward towards the centre of your hand when gripping an object. Unlike conventional gloves, Bionic gloves feature a pre-rotated design that follows the natural motion of your fingers.

Web and Motion Zones

Your hand features 14 phalanx bones and a large number of tendons and muscles. Combined, they allow for an intricate range of motion and dexterity. Bionic gloves feature stretchable and breathable Lycra material which provides greater flexibility and natural dexterity.
