| **Item number** | FR1011-025 |
| **Brand** | Hireko |
| **Manufacturer part no.** | FR1011-025 |
| **Category** | Ferrules and Adapters |

Black golf ferrule, 1/4 inch high (approx. 6.4 mm) for parallel tip shafts. Choose the version that matches your club head: iron, fairway wood or driver. Pre-sized outer diameter for a clean fit.

## Specifications

| | |
|---|---|
| **Hosel-Diameter** | 0,370 in |
| **Ferrule Type** | Wood, Iron, Driver |

## Description

## Golf Ferrule black 1/4 inch

The ferrule is the transition between shaft and hosel and protects the glued joint. This black ferrule, 1/4 inch high (approx. 6.4 mm) fits **parallel tip** shafts. It is not suitable for taper tip shafts.

### Versions and outer diameter

| Version | Outer diameter (OD) | fits |
|---|---|---|
| Iron | 13.6 mm | stainless steel irons and hybrids |
| Fairway wood | 12.2 mm | stainless steel fairway woods (newer models) |
| Driver | 12.6 mm | titanium drivers |

The outer diameter is pre-sized for common hosels, so after gluing the ferrule only needs to be turned flush with the hosel and polished.

### FAQ

**Which version do I need?**

It depends on the club head: irons and hybrids need the iron ferrule, fairway woods and drivers the matching wood version. If unsure, measure the hosel outer diameter with a caliper and compare it with the table.

**Will it fit my shaft?**

It fits parallel tip shafts. On taper tip shafts it will not sit tight; use a taper tip ferrule instead.

**Can I replace the ferrule myself?**

Yes, with some experience. The shaft usually has to be pulled from the head, and the new ferrule is slid onto the shaft before gluing.
