Putter counterweight (60, 80, 100 g)

Item number	CWSPutt
Brand	Hireko
Manufacturer part no.	CWSPutter
Category	Weights / Screws

Counterweight for steel putter shafts in 60, 80 or 100 g. Adds weight at the butt end for a calmer stroke. For butt diameters of 0.590 to 0.600 inch.

Description

Putter counterweight (60, 80, 100 g)

Many players use a counterweight in the putter to quiet the hands and make the stroke more consistent. The weight sits in the butt end under the grip and moves the balance towards the hands.

Installation: insert the weight into the butt end and fit the grip over it. With heavy counterweights, a slightly heavier head can restore head feel.

Specifications

Weights	60, 80, 100 g
Fits	steel putter shafts with 0.590–0.600 inch butt
Position	butt end, under the grip

FAQ

Which weight is right?

60 g is often enough for a calmer feel. 80 and 100 g are usually combined with longer or heavier putters. Lead tape on the head helps to test.

Will it fit my putter?

It fits steel shafts with a 0.590 to 0.600 inch butt. Measure the outer diameter at the butt end with a caliper.

Does the grip have to come off?

Yes, the weight goes into the open butt end, then the grip is fitted.
