Description

Acer SR1 Titanium Mini Driver 13° – Custom Built by Tesi-Golf

More control from the tee, a compact appearance and a setup tailored to your game: the **Acer SR1 Titanium Mini Driver 13°** is built by Tesi-Golf as a complete custom golf club according to your individual specifications.

Instead of an off-the-rack club, you receive a personally configured combination of **clubhead, shaft and grip**.

Key parameters such as **shaft model, flex, playing length and grip** can be selected to suit your preferences and playing style.

The result is a custom-built **Mini Driver** that combines the advantages of a compact driver head with professional clubmaking.

Compact 300cc Titanium Mini Driver

With its **300cc clubhead**, the Acer SR1 is significantly more compact than a conventional modern driver with a head size of up to 460cc.

This compact design is particularly attractive to golfers looking for more confidence, control and a cleaner appearance at address.

The Mini Driver sits between a traditional driver and a fairway wood, making it an interesting option for golfers who want a reliable club for tighter tee shots and demanding fairways.

Benefits of the Mini Driver Concept

- Compact 300cc titanium clubhead
- 13° loft
- Increased control from the tee
- Versatile tee-shot option
- Alternative to a traditional driver
- Ideal for narrow fairways
- More compact look at address
- Fully customizable build

13° Loft for Easier Launch and Control

The **13° loft** is higher than that of many traditional drivers.

This creates an interesting combination of driver-style performance with a slightly higher launch window.

It can be especially suitable for golfers who prefer a more controlled ball flight and an easier launch.

The Acer SR1 can therefore work very well as an additional **fairway finder** for tee shots where accuracy and keeping the ball in play are more important than maximum distance.

Custom Made Instead of Standard
The key difference at Tesi-Golf:

Your Acer SR1 Mini Driver is individually built for you.

A custom golf club allows several components and specifications to be matched to your requirements.

Choose Your Shaft

The shaft has a major influence on the feel and performance characteristics of the club.

Depending on the available configuration, you can choose from different:

- Shaft models
- Shaft weights
- Flex options

- Launch profiles
- Manufacturers

Choose Your Flex

Depending on the selected shaft model, different flex options may be available, for example:

- Ladies
- Senior / A-Flex
- Regular
- Stiff
- X-Stiff

Swing speed is only one factor when choosing the correct flex. Tempo, transition, feel and personal preference can also play an important role.

Individual Playing Length

One of the key advantages of a custom Mini Driver is the ability to specify the **playing length individually**.

A shorter build can help increase control and improve strike consistency.

A longer build may place more emphasis on clubhead speed and distance potential.

The ideal playing length depends on the golfer and the intended use of the club.

Choose Your Golf Grip

The grip is also part of the custom configuration.

Depending on the available range, you can choose from different:

- Manufacturers
- Models
- Materials
- Grip sizes
- Colours

The correct grip size can have a significant influence on comfort, control and overall feel.

Professionally Assembled by Tesi-Golf
Once your configuration has been selected, the **Acer SR1 Titanium Mini Driver** is individually assembled by Tesi-Golf.

The selected components are professionally matched and installed.

Depending on the configuration, we consider factors such as:

- Clubhead
- Shaft

- Playing length
- Shaft weight
- Flex
- Grip
- Grip weight
- Total club weight
- Balance
- Swing weight

This creates a club that is individually configured rather than simply built to a standard specification.

Who Is the Acer SR1 Mini Driver Suitable For?

The custom-built Acer SR1 Mini Driver is particularly suitable for golfers who:

- want more control from the tee
- prefer a compact driver head
- do not like the look or feel of large 460cc drivers
- need more confidence on narrow fairways
- want an additional tee club in the bag
- want to combine distance with increased control
- prefer an individual playing length
- want to choose their own shaft
- value custom-built golf clubs

Driver or Mini Driver?

A Mini Driver does not necessarily replace a traditional driver.

Instead, it can provide an additional tactical option in the golf bag.

Traditional Driver:

Large clubhead designed primarily for maximum distance from the tee.

Mini Driver:

More compact head designed to combine distance with increased control.

Fairway Wood:

Smaller head and generally more versatile from both the tee and fairway.

The Acer SR1 can therefore fill the gap between a **driver and fairway wood**.

Your Individual Tesi-Golf Configuration

Configure your Acer SR1 Mini Driver according to your requirements:

1. Choose your shaft

Select the shaft model you prefer.

2. Choose your flex

Select the flex that best suits your game.

3. Select your playing length

Choose the desired final club length.

4. Choose your grip

Select your preferred grip model and size.

5. Tesi-Golf assembly

We professionally build your Mini Driver according to your selected configuration.

Tesi-Golf Clubmaking

Your Golf Club. Your Configuration.

At Tesi-Golf, the focus is not only on the clubhead itself.

By individually combining **clubhead, shaft, playing length, flex and grip**, the finished golf club can be tailored much more closely to your personal requirements than a standard off-the-rack setup.

Our aim is to create a well-matched golf club using components that work together and suit the individual player.
