GolfQuant 3e Titan-Elektro-Caddy

Item number	GQe3
Brand	GolfQuant
Category	Electric Trolley

GolfQuant 3e Titan-Elektro-Caddy – hochwertiges Golfzubehör von Tesi Golf.

Description

GolfQuant 3e - Titan Electric Caddy

The ultimate example in the deluxe class - Unique in design and technology!
Individually configurable - Cover caps available in 6 colours

The high-quality and durable materials turn a stylish and sporty design into a luxurious top-class product. All joints and connections of the GolfQuant are made completely from one piece of high-strength aluminium. The polished titanium frame is precisely welded together by hand and guarantees a long service life

Modern electronics concept

The installed Swiss high-quality engines guarantee maximum enjoyment and a long service life. The electronic differential on the GolfQuant 3e ensures better off-road handling. This guarantees easier cornering and better responsiveness. The standard electric parking brake activates automatically at every stop. The electric downhill brake regulates the speed and ensures a constant driving speed downhill. Thanks to the very light and at the same time powerful lithium-ion battery, even longer tournaments are no problem.

Intelligent sensors and assistance systems

The integrated Lane Keeping Assist uses tilt sensors to measure the terrain and thus facilitates handling even on uneven roads by keeping the driving direction straight.

Should the GolfQuant tip over on rough or steep terrain, the standard tilt and slope sensor automatically deactivates the electronics.

The intelligent motor start of the GolfQuant takes over the current speed when pushing in freewheel mode at the touch of a button and continues to drive at this constant speed. This is where the memory start comes into play: The GolfQuant can be started directly at the last driven speed by pressing a button.

If desired, the integrated automatic distance control can steer the trolley fully automatically: with just a few button presses, the electric trolley automatically drives through the set interval of 10 / 20 / 30 metres and then activates the parking brake.
